

# Looking to reduce your business's Carbon Footprint? **We can help you!**

At Lumina Energy, we get it, you want to do your bit and help towards net zero emissions by 2050. However, you might not have the in-house resource, knowledge or an idea of how to get started. **This is where we come in.**

## Introducing your Carbon Reduction Plan:

This is a statement from your business which identifies and defines your carbon footprint and commitment towards targeting those all-important net zero goals.

Working with you we will establish your organisation's existing carbon footprint, enabling us to create a "benchmark" which will form part of your future reporting metrics so you can then compare your emissions reduction progress.

Once you know where you're at, we'll help you to set carbon reduction targets utilising our extensive network of partners and suppliers who can also support you in achieving these targets and reductions.

## What will your Carbon Reduction Plan cover?

- ▶ Commitment to Net Zero emissions
- ▶ Total emissions for Scope 1 and Scope 2 sources
- ▶ Scope 3 emissions dependent on obtainable data and regulatory requirements
- ▶ Details of current initiatives to reduce carbon emissions
- ▶ Details of future initiatives to reduce carbon emissions
- ▶ Internal sign off agreeing that the organisation commits to the plan
- ▶ Publication of the plan on the customer's website dependent on regulatory requirements

## Included in our Service:

-  Your Carbon Reduction Plan will be authenticated and quality assessed by a 3rd party carbon consultancy giving you peace of mind of the accuracy and quality of your CRP.
-  It'll comply with SECR and PPN 06/21 requirements in a highly presented manner to also add value to your organisation and impress suppliers and customers alike.
-  You'll receive a 12 month subscription to our online carbon accountancy software where we will support you in inputting your carbon centric data on a monthly basis to monitor progress against your benchmark and carbon reduction targets. This ensures that your data is being verified using official GHG conversion factors.
-  Quarterly reports will be provided to your organisation detailing progress made against your benchmark within that reporting period.
